- 'Immersive Consultants’ The Pre-Sales Team for Igloo Vision

- 15th May 2025

Overview of Presentation Topics

- Roles and Responsibilities of the Immersive Consultants
- The Pre-Sales process
- Intro call and demo
- Handover

Roles and Responsibilities of Pre-Sales Consultants

Pre-sales Strategic Goals

Provide the business well qualified opportunities, condense the sales-cycle and increase opportunity conversion rate: Through a series of structured and controlled client interactions, including introductory calls, demonstrations, POC's and requirements gathering workshops, the Pre-sales team will convert MQL's into well qualified opportunities for the sales team with documented requirements, and with the client committed to Igloo and in a ready to buy mindset. This process will also protect the company from unfounded resource requests by unqualified leads.

6 Key responsibilities

1. **Lead Qualification**: The pre-sales team uses frameworks like BANTs (Budget, Authority, Need, Timing, space) to assess and qualify inbound leads aggressively . We will implement efficient follow-ups based on engagement, industry relevance, or company size

2. **Requirements gathering and documentation**: Gathering detailed requirements from prospects through structured interactions such as introductory calls, demonstrations, POCs, and workshops. This ensures that the sales team has well-documented requirements to work with.

3. **Demonstrations and Presentations**: Creating and delivering compelling presentations and demonstrations to showcase the company's offerings. This includes remote demos, immersive room demos, and tradeshow support

4. **Lead Nurturing**: Providing the perfect marketing content at the right time such as emails, case studies, and demos tailored to the needs and interests of each lead to push the lead through to solution stage as efficiently as possible while building trust

5. **Technical Support**: Providing technical expertise and demo support throughout the sales process. This includes content and capability expertise, Core Engine technical support through the sale, and ensuring that the technical aspects of the solution are well understood by the client and the rest of the igloo teams.

6. **Outreach and prospecting**; With remaining available time Pre-sales team will organise and attend industry events, conduct out-reach programmes and search for suitable opportunities.

Expected outcomes and goals

Improved Client Engagement

We anticipate enhanced interactions with clients, fostering loyalty and satisfaction through dedicated consulting efforts.

Streamlined Sales Processes

The goal is to create efficient and condensed sales processes that reduce friction and increase productivity for the sales team, also enabling efficient contracting and project initiation.

Increased Conversions

By implementing these strategies, we expect a significant rise in conversion rates, driving overall business growth.

Improved Expert Knowledge

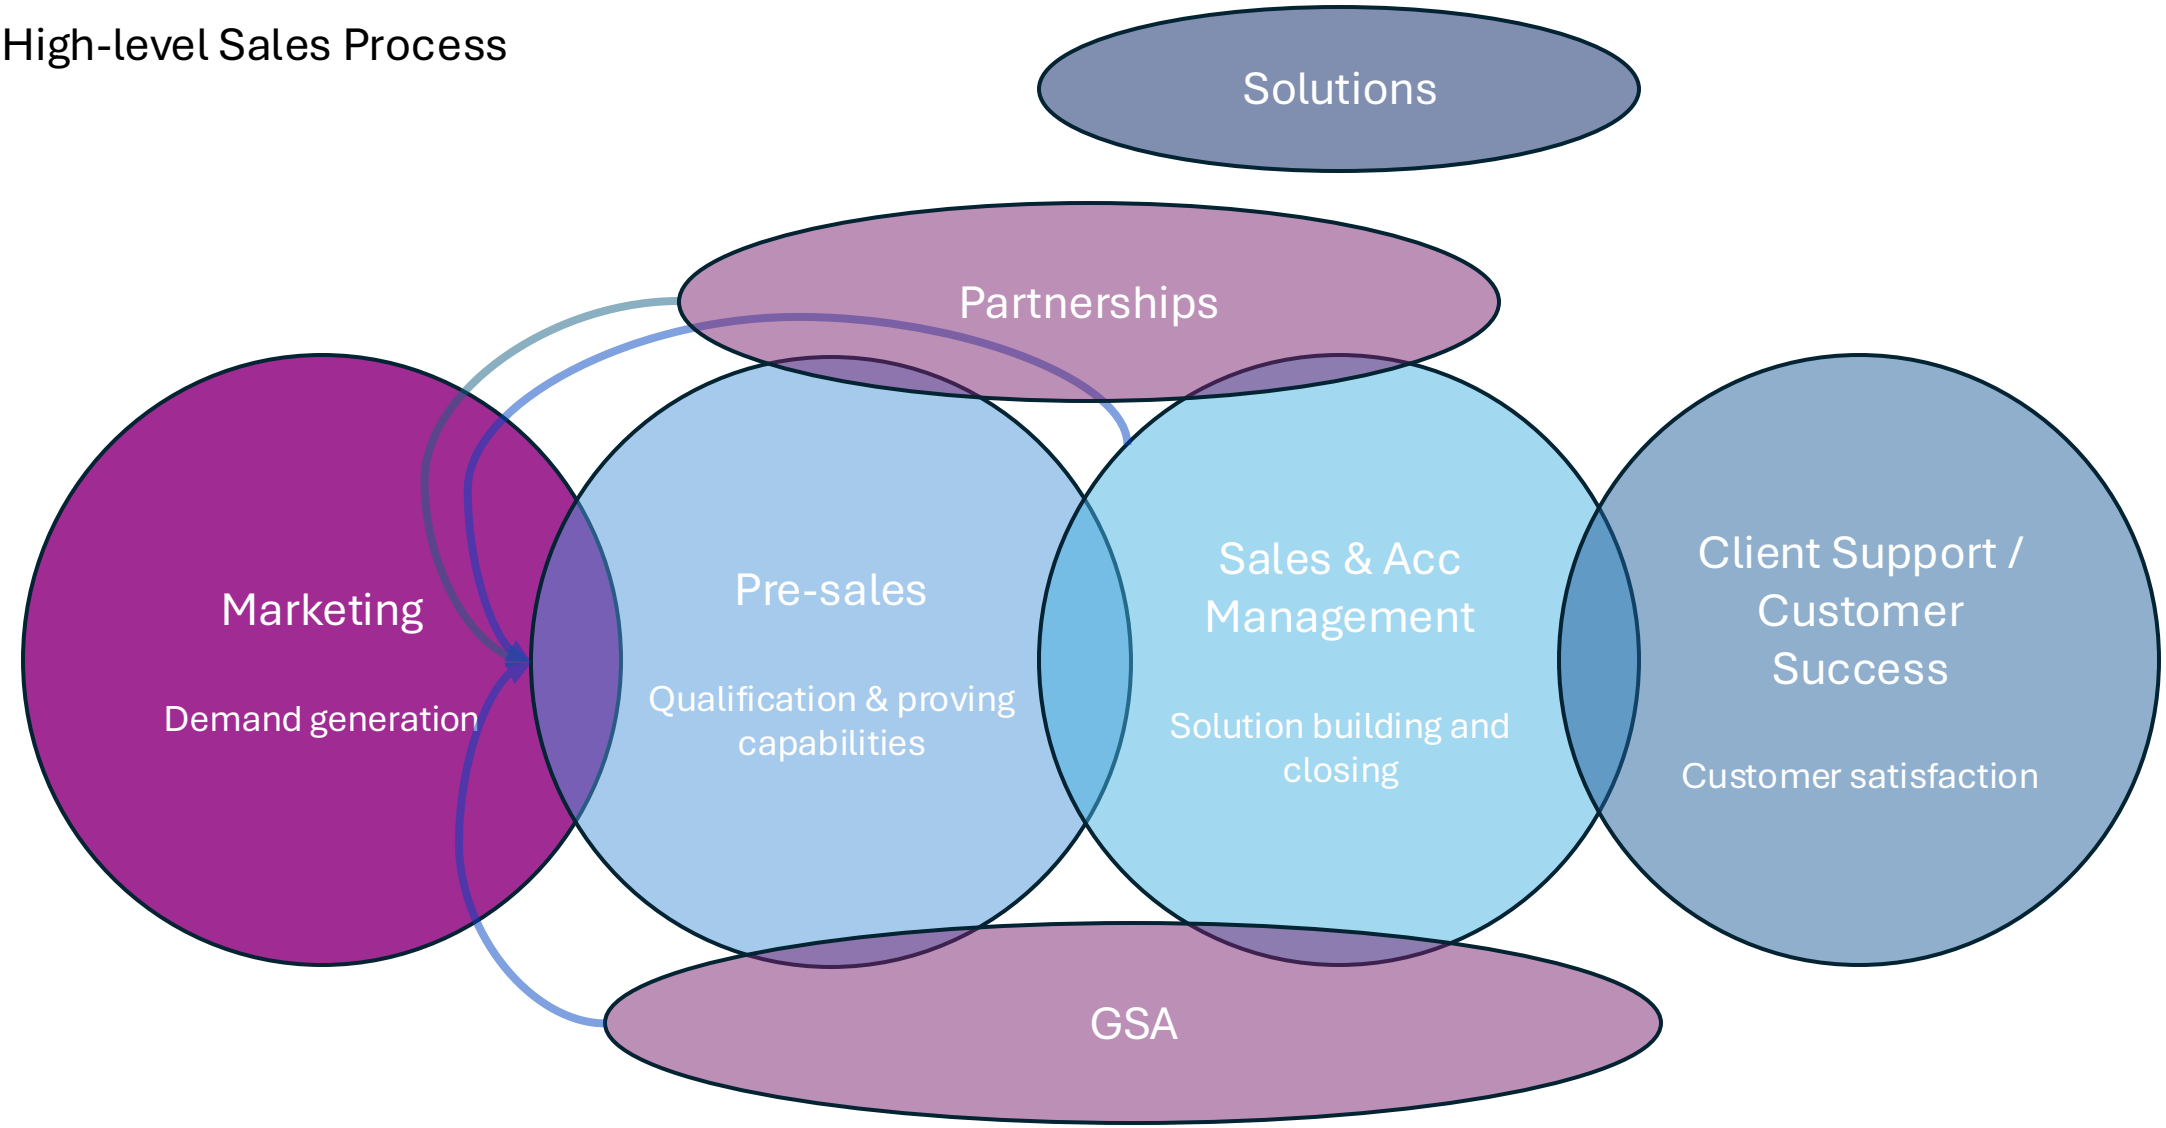
By focusing a smaller team on this stage, and others on later stages, each team should have more time to become expert in their part of the funnel. For pre-sales this will be demo qualification questioning, demo skills, content and workflow understanding.

Reduced wasted resource

Use the

Sales & Pre-sales process

High-level Sales Process

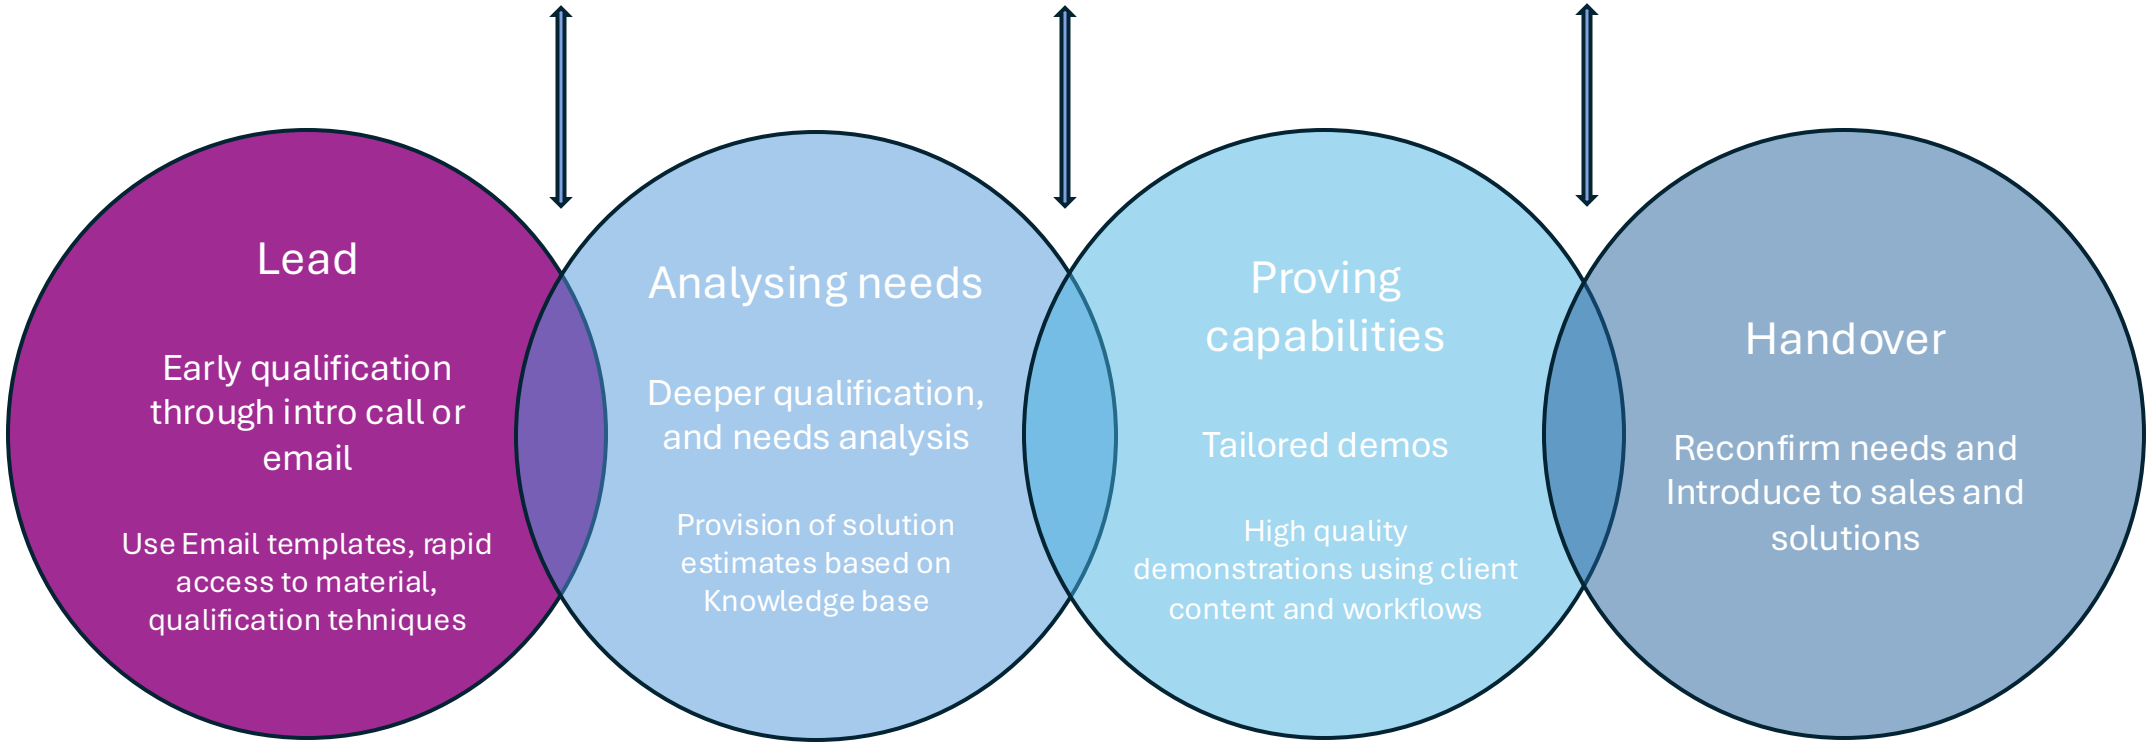


Pre-Sales Process

Gate 1 – Budget range known £150K +

Gate 2 – Type of solution, use case and content requirements known

Gate 3 – Opportunity BANTS known, use-case / content types proven & customer requesting accurate pricing



Stage	Touchpoint	Action	Output	Why	Qty	%
SF LEAD	• Respond to initial enquiry	• Email Phone same day response (within business hours) Goal 2 hours - Max 12h	• Track all activity in CRM • Booked 30-minute call	• Ensure 100% of leads recorded in regular trackable method - Salesforce		100%
SF LEAD	• 1st interaction with prospect • Teams call	• Call via Teams (must be video or audio tracked) • 1st call all questions – Sandler's methodology – no demo – tease with background content • Can qualify with large ballpark • Deliver interaction with these characteristics; • Personable, knowledgeable, friendly, fun, driven, focused	• Agreement that both companies will assess whether to move forwarded together or not • Recorded 30-minute call • Ai notes from Gong • Next step agreed (deeper demonstration, gather budget knowledge, return with deeper requirements) • Requirements gathering started • Initial BANTS interrogated • Understand sector	• Instill trust with prospect from 1st interaction • Keep uniformed style of response globally • Set-off on collaborative journey to success		95%?
LEAD / Analysing needs	• 2nd interaction • Email response	• Use Gong 'Generate Response' tool to create follow-up response to confirm high level requirement and outline next steps • Provide material such as case studies etc to answer any questions that arose during call. • Aim to schedule next demonstration within 2 weeks	• Gong produced re-cap list • Gong produced next steps • Provide product / company / industry materials • Project estimates based on previous projects • Turn down any requests for custom design / costs • **Information uploaded to fields in SF direct from GONG**	• Ensure prospect knows path forward and timelines to work to • Give prospect 'Homework' and need to put effort into the deal (get stake holders involved, what tools are used etc) • Filter through pricing		85%
	CONVERT LEAD TO 'ANALYSING NEEDS' OP – CRITERIA = Lead knows rough ballpark costs of Igloo technology and has expressed interest to continue discussions and move to next steps **Only required field is ' Budget notes' and Lead source completed in Gong or SF**					

Stage	Touchpoint	Action	Output	Why	Qty	%
	CONVERT LEAD TO 'ANALYSING NEEDS' OP – CRITERIA = Lead knows rough Ball Park numbers and has expressed interest to continue discussions and move to next steps					
Analysing needs	• 3rd interaction • Intro demo remote demo	• Configure simple demonstration covering functionality, use cases and content types prospect expressed. 30 or 60 minutes	• Generic demo from immersive room (industry / sector based) • Recorded video transcript • Gong output • Impressed prospect	• Show tech in use • Validate expectations • Draw out concerns		65%
Analysing needs	• 4th interaction • Email	• Email / call , follow-up requesting feedback and agreement that Igloo is correct solution/provider • Understand approval process – Understand and plan next stages • What are use-case requirements to prove? • List of apps, content that needs to be delivered	• Gong Summary email – Needs Manual review • Outline next steps and timeframe • List things the client needs tosee to decide on Igloo (integrations, stakeholders, available budgets, request floor plans etc) • More detail added to Gong / CRM • Stakeholders added to CRM and mapped	• Move to next stage of sales process and refine in on the solution and the buying process • Record more detail forhandover		
	• **Complete BANTS to best of knowledge and next demo / call to look at custom use cases agreed = Convert to PROVING CAPABILITIES**					
Proving Capabilities	• 5th Interaction • Demo	• Customized demo showing / proving needed capabilities and engaging stakeholders • Aim for decision makers present on call	• Custom content added • New 'sessions' created to show tailored use case • Gong follow-up email and recap	• Easy for customer to see themselves using the technology • Confirm it meets their business needs		
Proving Capabilities	• 6th • Define requirements	• Receive and define requirements further • Floor plans • User experience expectation • Integrations needed	• Summary call • Provide agreed requirements to take to pricing • CRM updated	• Confirm space is suitable for need • Enable solutions to put together a plan for the space • Facilitate accurate pricing at next stage		
		Convert to HANDOVER stage **5 BANTS completed to best of Knowledge, Budget range known, business need know, understanding of space and timeline known, agreed next steps / interactions, detailed costing requested.**				

Stage	Touchpoint	Action	Output	Why	Qty	%
	CONVERT LEAD TO 'ANALYSING NEEDS' OP – CRITERIA = Lead knows rough Ball Park numbers and has expressed interest to continue discussions and move to next steps					
Handover	• Assign sales resource	• Alert regional sales manager to Op at Handover stage – request sales person assigned • Create handover briefing notes from Gong that covers use case, product requirements, shape, size etc. Put in notes section of SF op.	• Pre-Sales and Sales both included in opportunity team on CRM	• Allows recording of ownership		65%
Handover	• 6th Touchpoint	• Recap requirements for detailed design / costing with customer either through call or email. Include designated sales person.	• Gong Summary email – Needs Manual review • Detail for solutions team			
		HANDOVER from Pre-sales to Sales = Handover				

Sales & Pre-sales process

Goals

- Disqualify bad enquiries that cannot afford Igloo
- Get to know your contact/company
- Qualify and gather information about the project using BANTS methodology
- Plan for the next steps
- **Not to oversell Igloo**, but to understand pain points, requirements and build bond.

Intro Call Roadmap

- **Contact**
  - Reach out to client ASAP (within through provided info (phone or email)
  - Provide a specific time that works w/ your schedule, but prepare to adjust
  - Ex: “Would this Thursday 3/15 at 3 pm EST work for you?”

- **Prep**
  - Send meeting invite including ‘Intro’ in title (allows tracking)
  - Research contact and company (LinkedIn, company website, etc.)

- **Intro Call**
  - Ensure Gong is recording
  - Foster relationship w/ contact, build initial rapport
  - BANTS (and follow up questions, get specific)
  - Agree next steps (specs they send, use cases you send)
  - Schedule follow up at the same time

- **Follow Up**
  - Utilize Gong ‘generate follow-up’ to reconfirm key points and outline next steps from the call
  - Attach necessary marketing material (PDF’s, Video links, Pictutres)

B

A

N

T

S

BUDGET

- Gauge how much they have to spend on a facility, find if there is flexibility or needs outside approval
- Estimate cost if asked, give ranges, emphasize how it is not exact and final pricing can fluctuate with contributing factors and customizations

Examples

- **"**Do you have a ceiling budget for this project?" "Is there flexibility on this price?" **"**Set ups in the past have cost between – and - , but there are always fluctuations with shipping and whatever custom solutions you would like to implement"

AUTHORITY

- Is this person the final decision maker of the project? Are they implementing a space for their client? Do we need an NDA? Find out who is going to be the person approving the contract, do they know?
- Bring on the final decision makers ASAP to expedite the process

- "Is this project for a client?" "Would they like to be looped into this demo?" "Is there a person or team that is in charge of signing off on this project? And can we involve them at this stage?"

NEEDS

- Discover what business problems Igloo can solve (get specific)
- Inquire about: client meetings, daily software use, collaboration, training, event goals, immersive content already in use, video conferencing, and the general day to day goings on of the office, you can use these in your demo

- "What are you looking to get out of your immersive space?" "What software do you use on a daily basis?" "Would you bring clients into this space?"

TIMELINE

- Find all major points in the timeline
  - Pitching: if this is a third party when do they need to pitch this to their client? Are they bringing this to an executive at some point to sign off
  - Contracting: when does everything need to be signed off
  - Install: make sure you give a 3-month window min

- "What is the timeline of this project?" "When do you need to install this system?" "How long is the event?"

SPACE

- Inquire about where they would like to implement these facilities
- Is it an existing building or planned?
- Ask for floor plans and pictures

- "Would you be able to send me any specs or floor plans you have?" "Are you currently building this space or are you looking to retrofit a space?"

Goals

- Showcase the transformative value of Igloo technology using client-relevant content
- Create a shared vision of success: what their workflows, presentations, or training could feel like inside an Igloo
- Build emotional resonance through digging into main pain points showing how Igloo can resolve them.

The Igloo Demonstration – Core Flow & Purpose

Structure of the Demonstration Meeting

- **Quick context recap**

  "Can you briefly remind us what use cases were you looking to utilise an igloo for and what stage the project is at? (Rationale: reconnects the demo to their pain points or KPIs)
- **Technology overview – explain the tech used in the immersive room**

  (Rationale: Gives context to the demo and connects them with tangible components)
- **Flexible content navigation and keep agile**

  "Would you like to see how this applies to your training, data visualisation, or collaborative sessions first?"

  (Rationale: gives them agency and surfaces their top priority)
- **Live showcasing of features & interactivity – Customise, keep dynamic and interactive**

  Ask: "How do you currently present or experience this content today?"

  (Rationale: contrast Igloo immersion with their current friction-heavy methods)
- **Mid-demo checkpoint**

  "Does this match how you envisioned it might look in your space?"

  (Rationale: tests alignment and opens deeper discussion)
- **Keep time for be brief, client feedback and next steps**

  Do you think this technology could solve your problems and what do you see as next step?"

  (Rationale: tests alignment and opens deeper discussion)

Goals

- Showcase the transformative value of Igloo technology using client-relevant content
- Create a shared vision of success: what their workflows, presentations, or training could feel like inside an Igloo
- Build emotional resonance through digging into main pain points showing how Igloo can resolve them.

The Igloo Demonstration – Core Flow & Purpose

In-Person / Hybrid Demonstrations

Highlight:

- Group interaction / Build Rapport
- Blow away with wow factor impactful video – build buying impulse
- Overview of immersive solution you are presenting from
- Use of "Home Screen' and customisation, or Content Bank
- Perspectives of remote user and in person
- Ease of use – interfaces that can be utilised for different users, tablet, touch, desktop
- Igloo Core Engine Canvas user interface
- Sector specific content covered highlighted use-case and business problems
- Multi-source content layering and switching: VR, 360°, web layers, BIM, GIS
- Integration with existing tools/platforms (e.g. YouTube, Matterport, Streetview,)
- Everyday collaboration use - Teams, white board, BYOD, screen share
- Scalable deployment across sectors and space sizes

Ask: "Can you imagine your team standing in here during project briefings or training sessions?" (Rationale: trigger visualisation and ownership)

Ask: "Is there anything specific anyone on the call wanted to see?" (Rationale: keeps engagement active and tailored)

Next steps confirmation

Gather vital information needed by solution sales team to provide clear and accurate quotes.

"Has what you have seen made you feel confident this could work for your company?"

(Rationale: uncover barriers, qualify interest, and prep for next step)

B A N T S

B Budget

Winch Design is looking for two pricing options: - Off-the-shelf 4x4 Igloo – A standardized immersive solu Winch Design has an estimated budget of £100-200k for the proposed workspace solution, and they are looking for a cost-effective solution. Winch Design is open to discussing leasing or financing options for the purchase. They sell their designs to high net worth individuals

AI note

A Authority

- Greig Jolly (Partner, Yachts & Aviation) is leading the initiative. - A technical team member has also been involved in testing the Igloo setup. - The board of directors will make the final decision. - They may run a remote demo to showcase the solution internally. Greig Jolly, a Partner at Winch Design, needs to put together a proposal for the board and has had positive discussions with some board members, indicating they are the key decision-makers. Greig believes getting the board members to experience the immersive rooms would help sell the idea, suggesting he needs to convince the decision-makers. Greig acknowledges that he needs Igloo's help to sell the idea to his colleagues, the decision-makers.

B A N T S

-Winch Design wants an immersive space to enhance client presentations.-Their CGI department produces high-end visuals, which they tested in the Igloo.-The immersive room should:-Display high-resolution yacht and jet renders at human scale.-Support 2D CAD drawings, sketches, and animations.-Be seamlessly integrated into their luxury client meeting space.-Feature a hidden door for dramatic client engagement.-Potentially allow future upgrades (e.g., floor projection, VR). Winch Design is looking for a more effective way to present their high-quality, creative design work to clients that allows them to fully understand and visualize large-scale projects like superyacht floor plans. Winch Design's current presentation methods, such as using 42-inch monitors, sketches on paper, and flipping through PDFs, make it challenging to keep clients engaged and provide a seamless experience when discussing design details. Winch Design is seeking a solution that can improve their presentation capabilities and provide a more immersive experience for their clients.

AI note

Timetable

By end of July-Immediate next steps:-Provide clear pricing for both solutions.-Winch Design presents to the board.-Potential remote demo to reinforce the proposal.-No fixed deadline yet, but they are eager to move forward.

Cancel Save

* = Required Information

A successful handover

Completed BANTS

These will be as complete as possible at that stage of the opportunity but will evolve over the next stages of the sales process.

Completed Pre-sales solution info / Requirements doc uploaded

The Pre-sales team will gather as much information around the solution and use case requirements as possible and record in Salesforce.

Uploaded documents

Any documentation, floor plans, pictures etc will be stored in Sales force for the Salesperson to access and implement into share point for next stage.

Handover email / Summary

At point of handover the pre-sales team will generate a summary through Gong which will be manually verified. This will form the briefing for the sales team. An introductory email will also be sent recapping requirements and introducing sales/solutions team

Thank you
