What content can I use with Igloo Core Engine?

A list of content types and applications that work with our software

igloovision.com

What content can I use with Igloo Core Engine?

Igloo Core Engine is designed to bring a wide variety of content into shared immersive spaces.

From native integrations with third-party applications, to standard media formats and live data streams, to custom projects built with our developer toolkits - there are many ways to get your content into an Igloo.

This document introduces the different options available, lists which applications and formats are supported, and explains how developers can extend compatibility even further.

As well as through our set of Igloo integrations, there are a number of other ways to get data and content into an Igloo space -

01. Use our Igloo integrations

This document lists a range of third-party applications that have been integrated to work with Igloo, covering a variety of industries and use cases.

These tools have been tested, validated, and are supported for use within Igloo's immersive environments, so you can start using them right away.

02. Use a content workflow

With our layer-based system, you can choose from a range of different content types, ranging from standard formats to live streams and exports from other tools. These include -

- **Videos** – 360 equirectangular, non 360, h.265, HAP, YouTube streaming
- **Images** – 360 and non 360
- **Webview** – Load any website easily with our webview layer
- **PDF** - any PDF can be viewed
- **Game Engine Projects** – Unity or Unreal projects built with the Igloo toolkits
- **3D Models** – via the Igloo Model Viewer application
- **External** – bring your own device, NDI, Spout, and supported capture cards (e.g. - blackmagic and datapath).

View all layer types

03. Use our developer tools

Our developer tools give you the ability to create custom experiences and connect additional content sources to your Igloo. With these, developers can build, extend, and control immersive applications, including -

- Unity Toolkit
- Unreal Toolkit
- Igloo API - control layers, sessions, and playback via external commands
- WebXR and WebGL (with Igloo guidance) - bring compatible web-based experiences into your Igloo

What is an Igloo integration?

An Igloo integrated application is a third-party app that has been made compatible with Igloo Core Engine - either through our official tool kits or custom integration work.

Because the integration is maintained by the app's own developer, any new features, updates, or bug fixes are delivered automatically through the normal app update process.

For Igloo Vision customers, when combined with our True Perspective technology, this means faster deployment to any immersive room shape or size, guaranteed compatibility with the latest version of the app, and the confidence that the experience has been designed, tested, and supported by the people who know the software best all of which reduces setup time, minimises maintenance, and ensures a smoother, more reliable immersive experience.

Don't see the application you'd like to use?

Ask if your app developer can integrate with Igloo Core Engine.

Third-party app developers can embed the Igloo plug-in into their application, making it fully compatible with Igloo's immersive systems. This also means you can benefit from ongoing support and release coordination with Igloo's dedicated application engineering team.

Integrations

On the following few pages, you'll find our full list of Igloo-approved integrations, alongside some additional information on each.

	Category	Description	
ArcGIS Esri (Beta)	Virtual Map	A geographic information system (GIS for mapping, spatial analysis, and data visualization, used across industries for decision-making and planning.	Find out more
AVEVA XR	Digital Twin/Model Viewer	Plant visualisation software.	Find out more
Avatour	360-video conferencing	A 360° remote collaboration platform for real-time virtual site meetings.	Find out more
BaselineZ	Digital Twin/Model Viewer	A platform for remote collaboration and 3D visualization of geoscience data.	Find out more
Cenario VR	Training	Authoring tool for creating immersive, interactive 360 simulations.	Find out more
Cesium (Demo)	Virtual Map	A platform to explore 3D Geospatial data.	Find out more
Cintoo (coming soon)	Point Cloud Viewer	A platform for converting 3D scan data into digital twins.	Find out more

Integrations

	Category	Description	
Evolution XR	Training/Education	A mixed reality learning platform offering immersive training for high-hazard industries.	Find out more
HTC Viverse	Virtual Tour	An immersive spatial computing platform that enables users to create, explore, and share virtual worlds.	Find out more
Kairos 3D	Training/Education	A platform for creating real-time 3D industrial simulation solutions.	Find out more
Kuula	Virtual Tour	Virtual Tour building software.	Find out more
Matterport	Virtual Tour	Virtual Tour building software.	Find out more
Metaverse Learning	Training/Education	Interactive, immersive learning through virtual reality and digital environments.	Find out more
Revizto	Digital Twin/Model Viewer	A collaboration platform for 3D BIM project coordination and issue tracking.	Find out more
Siemens Walkinside	Training/Education	A 3D virtual reality software for immersive industrial plant navigation.	Find out more
SkyboxAI (Blockade labs)	Generative AI	An AI-powered platform for creating immersive 360° environments from text prompts.	Find out more
Spacewalk	Virtual Tour	A real estate visualisation platform, enabling immersive virtual tours.	Find out more
Streetview	Virtual Map	Interactive 360 street-level imagery.	Find out more

Integrations

	Category	Description	
ThingLink	Interactive Tour	A visual learning platform, build scenes with interactive hotspots for info popups.	Find out more
Unity	Game Engine	For use via toolkits. A real-time 3D development platform for games, simulations, and XR experiences.	Find out more
Unreal Engine	Game Engine	For use via toolkits. A real-time 3D creation tool for games, simulations, and XR.	Find out more
VisCo	Training/Education	ERP software designed for importers and distributors.	Coming soon
VREX	Digital Twin	A VR platform enabling collaborative BIM model reviews and issue tracking.	Find out more
WarpVR	Training/Education	A platform for creating and scaling immersive 360° VR training scenarios.	Find out more
Wonda VR	Training/Education	An AI-driven platform for crafting interactive VR training simulations.	Find out more
YouTube 360	Video Hosting	A platform for uploading and viewing 360-degree immersive videos.	Find out more

PLEASE NOTE

3D models can be viewed in the Igloo using one of Igloo's model viewers, supporting GLB / GLTF, FBX, OBJ, and more, allowing the user to navigate around the model in real time.

Igloo Developers

Unreal Engine or Unity Toolkits

If you have access to a project developed using Unity or Unreal Engine, it can be brought into the Igloo and played in full 360, providing an immersive and interactive experience.

Igloo Unity Toolkit	Game Engine	Download
Igloo Unreal Toolkit	Game Engine	Download

APIs

Your Igloo can be remotely controlled via custom API commands using URI, giving flexibility over the content and functionality that can be displayed and interacted with in the Igloo.

Works with Igloo

Getting images and videos from AEC applications not currently fully integrated

Igloo Core Engine can easily play videos and images. Many applications that don't yet have an Igloo integration can export videos and images. Below is a list of those we are frequently asked about.

Bentley Synchro	Can export 360° videos which play in the Igloo
Enscape	Can export 360° panorama and videos. The panoramas work well, the videos will play but are distorted due to the perspective
Lumion	Can export 360° panoramas which work well in the Igloo
Unreal Twinmotion	Can export 360° videos which play in the Igloo

Web Content

Igloo Core Engine has the capability to load websites and display in a 360° view where compatible. Alternatively, individual windows can be snapped into place to create user-friendly dashboards. While the list below includes commonly used websites, almost any website can be loaded. The effectiveness of the display, whether in 360° or as dashboards, depends on the specific website.

Non-360

- Autodesk BIM 360
- Autodesk DWG TrueView
- Bentley iTwin
- CoSpaces Edu
- Google Docs
- Google Drive
- Google Sheets
- Labster
- Microsoft Excel
- Microsoft Forms
- Microsoft OneDrive
- Microsoft OneNote
- Microsoft Outlook
- Microsoft PowerPoint
- Microsoft SharePoint
- Microsoft Teams
- Microsoft Visio
- Microsoft Word
- OnShape
- Zoom

360

- Bluescape
- Cenario VR
- Emu Analytics Building Heights
- Executive Eye
- Google Slides
- Microsoft Planner
- Microsoft PowerBI
- Microsoft Sway
- Microsoft Visio
- Miro
- Mural
- Padlet
- Pinterest
- Tableau
- ThingLink
- Trello
- YouTube
- Figma
- Slides.com
- Quizlet
